

T9000E™ Wireless Throttle

WORKS WITH ALL EASYDCC, LENZ, ATLAS DCC SYSTEMS

- ◆ Big, bold digital display
- ◆ Simple to learn and simple to use
- ◆ Store and recall up to 15 addresses
- ◆ 900MHz operation for long range
- ◆ Long range ½ wave flexible antenna
- ◆ 50% greater battery life than our other wireless throttles
- ◆ Use along with our existing wireless throttles

The T9000E wireless throttle comes with many exciting and often requested features while retaining the same physical size as our award winning wireless throttles. The most obvious addition is the big bold digital display. This display provides continuous information about the locomotive including the ability to instantly show the present speed value being transmitted.

New to this throttle is the ability to store up to 15 addresses along with their associated speed and direction information. At any time, the locomotive address may be recalled from memory with the throttle instantly matching the previously stored speed and direction. A new rotary encoder speed knob is used to scroll through memory selections.

Another new addition is the use of a ½ wave antenna. This style antenna provides improved performance within the typical confines of a layout room.

A new power supply design provides a 50% increase in the battery lifetime. A special symbol lights up when the batteries have about 15 minutes of useful life remaining. The same low cost alkaline AAA cells may be used or you may use rechargeable NiMH or NiCad cells.

The T9000E is compatible and works along with existing wireless throttles and receivers from CVP Products. It supports both burst and scan modes of transmission. Frequencies are selected using the keyboard - no need to open the throttle. There is no need to make any changes to your existing equipment to start enjoying the benefits of the T9000.

Order several T9000E throttles today at this special introductory price.

T9000E Wireless Throttle \$219

For EasyDCC, Lenz and Atlas DCC Systems. Includes detachable antenna and detailed instruction manual. Batteries are not included. Requires 4, AAA batteries which are not included.

RX904PE Wireless Basestation for EasyDCC \$99

Wireless receiver basestation for the **EASYDCC** system. Includes AC transformer, antenna, 6 foot modular cable and detailed instruction manual. Supports up to 8 wireless throttles.

RX904AL Wireless Basestation for Atlas/Lenz Systems \$99

Wireless receiver basestation for the Atlas and Lenz DCC systems. Includes AC transformer, antenna, 6 foot data cable and a detailed instruction manual. Supports up to 8 wireless throttles.
