# Phoenix BIG-SOUND 96/97 - G3 Hookup

The BigSound module has been obsolete for many years and is not a DCC compatible module. The external DCC multi-function decoder is needed to trigger the sound effects. The connection diagram has not been validated by CVP. We strongly recommend the use of either a Soundtraxx sound module or the Phoenix P8 module. If you are having difficulties with this installation, contact Phoenix Sound directly if you need help or have technical questions.
